

SUBSTANTIAL SAVINGS.

TECHNOLOGY THAT IS CHANGING THE LANDSCAPE OF WORKERS' COMPENSATION CLAIMS

- Proven claims reduction
- Reduction in lost time from work
- Improved employee care
- More accurate diagnosis

A Work Comp Solution For The Long Haul

30 – 80% Savings on Soft-Tissue Claims Cost

Soft Tissue Injuries Drive Up Work Comp Costs

The transportation industry faces many unique challenges today – an aging and mobile workforce, a high incidence of soft tissue injury claims, difficulty hiring healthy workers and prolonged return to work times. These factors play a significant role in creating the perfect storm for high Workers' Comp costs and an increase in the cost of doing business.

A Game Changing Solution

Our Electrodiagnostic Functional Assessment (EFA) test allows you to actually see beyond the surface of an injury to accurately pinpoint and diagnose soft tissue injuries. The test combines five medically accepted tests into a non-invasive technique that objectively evaluates the muscles of the neck, shoulder, back and extremities.

"The results since implementation of the EFA-STM program have ranged from lower injury frequency rate for baselined employees to injured employees simply dropping their claims altogether. It has helped us resolve numerous difficult claims and has prevented claims from turning into chronic pain high dollar claims. I have personally witnessed firsthand the positive results in preventing 6 figure claims."

Emerge Client, Transport Topics Top 100 Motor Carrier

The EFA Soft Tissue Management Program is a bookend solution that provides employers with a non-discriminatory approach to determine if a work-related injury occurred within the course and scope of employment (AOECOE). After performing a baseline test, EmERGE will store the unread data until there is a work-related injury. In the event of a reported injury, the baseline is then compared to a post-incident test to determine the age of injury and whether it relates to the reported incident.

Objective results allow EmERGE Diagnostics to provide doctors with valuable assistance, resulting in better diagnosis, prevention of unnecessary surgery, and more targeted treatment recommendations.

"Based on these results we believe that the EFA-STM program has been a win for all parties involved and a must for companies, especially in the transportation industry."
